PROJECTS

1) Minimalist Furniture Ecommerce Mobile App

Description : Using React Native , Expo , Expo-Router , Native Wind , Firebase For Authentication , Firestore Database and Redux Toolkit.

It's a furniture ecommerce app where you can discover different styles ,search for what you are looking for, save what you want to the cart and buy them.

2) LanguApp

Description : Using React Native , Expo , Expo-Router and Native Wind.

It's a language learning mobile app where you can choose the language you want to learn and play on the practice zone whether matching words , translating sentences or choosing the correct answer.

3) Job Finder Mobile App

Description : Using React Native , Expo , Expo-Router , Native Wind , Supabase For Authentication , Supabase Database (for storing user data) , Supabase Storage (for storing Profile Pics) , Expo image picker , Adzuna API for displaying job postings.

It's a job finder mobile app where you can update your profile picture , save jobs from the recommendations in home page , search for the job you want and when you press apply button, it will take you to the job application in adzuna website.

4) Ai Travel Planner Mobile App

Description : Using React Native , Expo , Expo-Router , Native Wind , Firebase For Authentication , Firestore Database , MapTiler , React Native Calender Picker , Moment.js , Gemini Google Generative Ai (for creating the trip plans) and Unsplash (for providing images for each location).

It's an AI-powered travel planning app which creates detailed trip plans by asking users some questions about their destination , budget and their preferences then sending them to Gemini and finally displaying the trip plans through modals in the home page.
